PEN OF THE DIGITAL AGE

Joelyn N. Pagaduan

January 26, 2026

After reading this article, I finally understand how to use AI the right way. Before, I was confused. I thought using AI might be cheating or lazy. But now I see it differently.

The author, Dr. Bagon-Faeldan, explains it in a simple way. AI is just a tool. It is like a pen for a writer, or a stethoscope for a doctor. The tool helps you, but it does not do the work for you. You still need to think, feel, and create.

I liked her example about writing a love poem. She did not ask AI to write the whole poem. She only asked for words that rhyme with "-ight." Then she used her own feelings and experiences to write the poem. That is real creativity. AI helped her find words, but the heart of the poem came from her.

This made me realize something important. When I use AI for school or personal projects, I should not just copy and paste. That does not help me learn. Instead, I can use AI to get ideas, check my grammar, or find the right words. But the main idea should always come from me.

The article also says that the process of learning is important. If I let AI do all the hard work, I will not become a better thinker or writer. I need to practice. I need to make mistakes. That is how I grow.

So from now on, I will use AI as my assistant, not my replacement. I will do the thinking, the feeling, and the creating. AI will just help me along the way. As the author said, the pen is digital now, but the hand that guides it is still mine.
