TECHNOLOGY TOOLS FOR LEARNING

Joelyn N. Pagaduan

January 19, 2026

Technology is very important in education today. After learning about different technology tools, I realized that they make teaching and learning more exciting. Before, we only used books and chalkboards. But now, we have many digital tools that help students understand the lessons better.

I learned that tools like videos, online games, and interactive presentations can catch the attention of students. These tools help students participate more in class. As a future science educator, I want to use technology to show experiments that are hard to do in real life.

However, technology is only a tool. A teacher is still the most important person in the classroom. We must use these tools properly to help students learn. Technology should not replace the teacher, but it should make our work better. I am excited to explore more tools to help my future students succeed in the 21st century.
